

B&D Mfg., Inc. is proud to celebrate 25 years of business in the geothermal industry.

B&D Mfg., Inc. was started in 1992 by Dallas Warnke, CEO and founder of the non-pressurized flow center. This original design of the GT Flow Center set the stage for success in the company, and changed the entire outlook on the geothermal industry. The non-pressurized concept was favored for its convenience and easy to use design.

The GT flow center has expanded to an entire product line of non-pressurized flow centers for residential as well as commercial use.

This family owned company started out in one building with four employees. It has expanded over the years to two manufacturing locations and three warehouse locations, serving customers across the United States and Canada. The number one priority, continued throughout the years is to deliver the best quality product and unbeatable customer service.

B&D prides itself on becoming an industry leader. The company's ability to create custom products based on customer's specific needs has resulted in continual growth throughout the past 25 years, and offers promise for the future. B&D is always pushing the boundary, thinking outside the box to deliver the highest standard there is to offer.

B&D extends a whole hearted thank you to our employees and loyal customers who have made it possible to reach this milestone. We look forward to serving you for many years to come!
